

Get your

**REINFORCING
STEEL** *from*

AUSREO's reinforcing bar and mesh is 3rd party certified to Australian Standards.

This means an independent, JAS-ANZ accredited organisation has assessed the conformance of our processed bar and welded mesh and certified that it meets the following Australian Standards:

- **AS/NZS 4671** – Steel reinforcing materials
- **AS 3600** – Concrete structures
- **AS 5100.5** – Bridge design – Concrete
- **AS 2870** – Residential slabs and footings

HOW TO GUARANTEE THE QUALITY OF YOUR REINFORCING STEEL

STEP 1: 3rd party certification

What to look for:

- Does the certificate cover the **processing and distribution of carbon steel bars and welded mesh**?
- Is the certificate **current** (check validity date)?
- Is the certifying body accredited by **JAS – ANZ**?

If you answer 'No' to any of these questions – you're putting your structure at risk of non-compliance.

STEP 2: Quality assurance

Tick all 3 boxes for your reo supplier:

- 3rd party certification
- ISO 9001:2015 compliant Quality Management Systems
- Member of Steel Reinforcement Institute of Australia (SRIA)
